

Gamers.bet Unity SDK QA Guide

Built for Unity SDK - V1

Prerequisites

Before testing:

1. Create a user account on the Gamers.bet platform: <https://app.gamers.dev/>
2. Fund the user's wallet.
3. Confirm access to the Sample Generator: <https://reference-server.up.railway.app/samples/index.html>
4. Open the Unity Client.

Pass Criteria

The QA test passes when all outcomes below are confirmed:

1. Email Code Request

Enter the Gamers.bet user's email address and request a code. The code must arrive at that address.

2. User Authentication

Submit the code in the Unity Client. The user must authenticate successfully and be able to join a tournament or event.

2. Wallet Creation & Funding

Create a user wallet after logging into the user portal. Successfully fund the wallet by following the steps in section 1.

4. Tournament or Event Entry

Enter a valid tournament or event ID. The Unity Client must confirm the user's entry.

5. User Portal Verification

In the User Portal:

- The transaction fee must appear on the Wallet page.
- The tournament or event must appear on the Stats page.

6. Leaderboard Retrieval

Show Leaderboard must return the successful response shown in this guide.

7. Sample Generator Verification

The Sample Generator must:

- Open a tournament or start an event with the ID available to copy and paste in the Unity client.

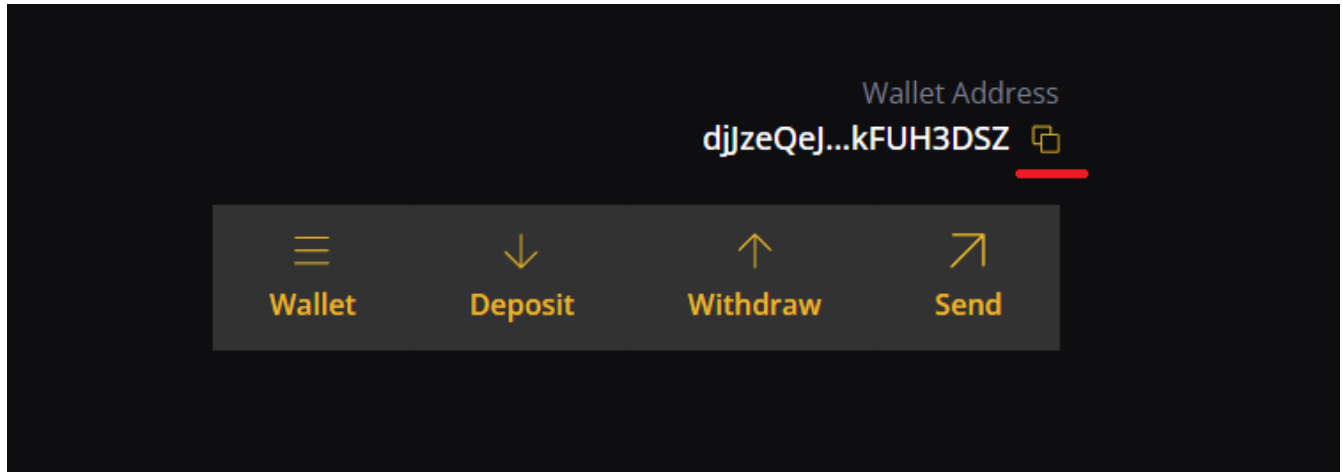

1. Set Up a Test Account

Create a Gamers.bet account here: <https://app.gamers.dev/signup>

Confirm the email address, then sign in to the User Portal: <https://app.gamers.dev/>

Go to Wallet and click Create Wallet.

After the wallet is created, you can then fund it. Copy the wallet address by clicking clipboard.

Navigate to Circle faucet to get funds: <https://faucet.circle.com/>

Ensure "USDC" is selected. It should be selected by default.

In the "Network" dropdown menu, select "Solana Devnet"

In the "Send to" field, paste the wallet address.

Click "Send 20 USDC". Wait for the faucet's success confirmation, then return to the Wallet and confirm the balance has updated before continuing.

Testnet Faucet

Send testnet USDC, EURC, and cirBTC to your wallet to experiment with fund flows in your app or smart contract for free.

Network

Send to

Limit: One request per pairing of asset and test network every 2 hours

This site is protected by reCAPTCHA and the Google [Privacy Policy](#) and [Terms of Service](#) apply.

2. Unity Client Fields

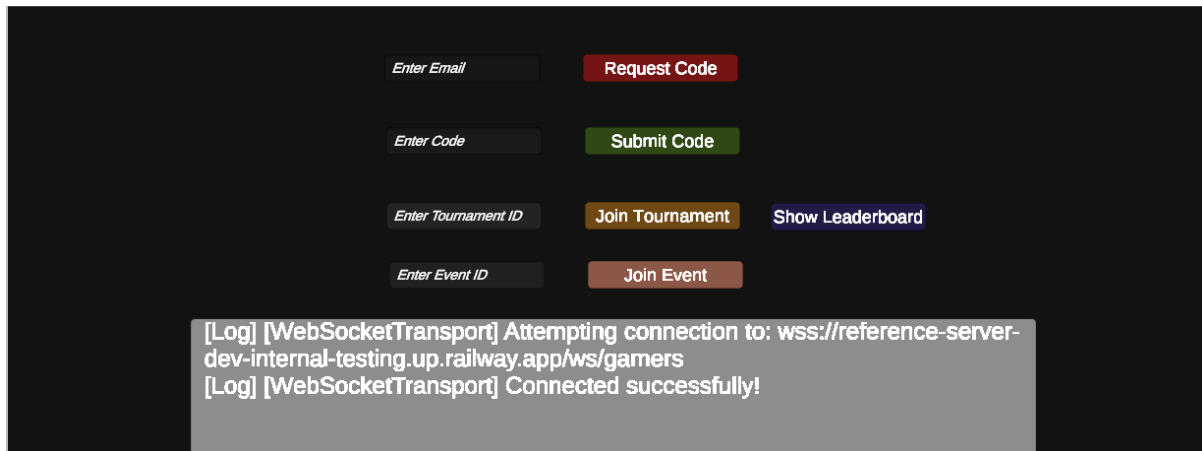

The Unity Client uses four fields to authenticate a user and enter a paid game mode:

Email: The email address associated with the user's Gamers.bet account.

Enter Code: The game code sent to the user's email address.

Tournament ID: The ID of the specific tournament the user will join.

Event ID: The ID of the specific event the user will join.

Authentication Note

In production, the email and code fields authenticate the user within the game. After authentication, the user can join multiple paid games without repeating the process, and authentication can persist between sessions.

For QA, the Unity Client demo requires email and game-code authentication at the start of each test session.

3. Successful Test Flow

Authenticate the User

Enter the test account's email address. The system sends a game code to that address, and the client state changes to `AwaitingCode`.

```
[Log] [ReferenceIntegration] State: RequestingAuth
[Log] [ReferenceIntegration] State: AwaitingCode
[Log] [ReferenceIntegration] Code requested for test@gamers.bet
[Log] [ReferenceIntegration] Code sent to test@gamers.bet
```

Enter the game code. The user should authenticate successfully, and the client state should change to `Authenticated`.

```
[Log] [ReferenceIntegration] State: AwaitingAuthResult
[Log] [ReferenceIntegration] State: Authenticated
[Log] [ReferenceIntegration] Authenticated: 91fa55a0-d8c7-48bf-ae39-a0a1fd44fb00
[Log] [ReferenceIntegration] Signed in as 91fa55a0-d8c7-48bf-ae39-a0a1fd44fb00
```

Join a Paid Game

The Unity Client supports two test paths, Tournaments and Events. In real world application, typically Tournaments are asynchronous game modes and Events are synchronous game modes.

Create a Tournament or Event to Join

Open the Sample Generator: <https://reference-server.up.railway.app/samples/index.html>

Click Connect to the right of the shared access key field. Shared access key is entered by default.

Sample tournaments and events generator

Entry fee: \$0.50 for tournaments and events. Capacity: 100. First place receives 100% of the pool.

Shared access key

.....

Connect

Create and open tournament

Create and start event

Enter your access key to get started.

Results

No samples created this session.

After the access key is accepted, Create and open tournament and Create and start event buttons become active.

Sample tournaments and events generator

Entry fee: \$0.50 for tournaments and events. Capacity: 100. First place receives 100% of the pool.

Shared access key

Ready. Each click creates and activates one sample.

Results

No samples created this session.

Choose the tournament or event option. Creation takes about one minute. When complete, the ID appears under Results. Click Copy ID and paste it into the corresponding Unity Client field.

Sample tournaments and events generator

Entry fee: \$0.50 for tournaments and events. Capacity: 100. First place receives 100% of the pool.

Shared access key

Sample created and activated. Copy its ID below.

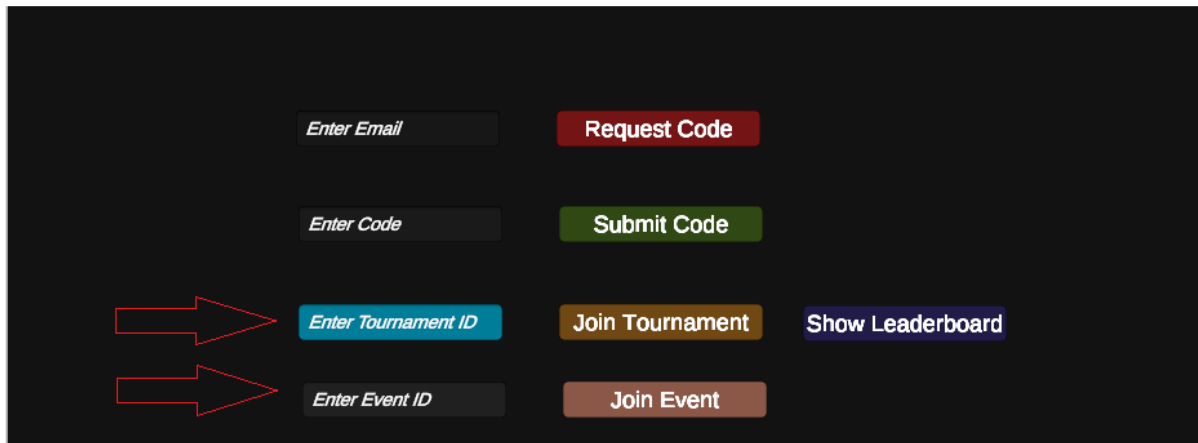

Results

Tournament · OPENED

cmu6a12tu0067rz01yww254p0

Event · STARTED

cmu69ummz005zrz013v9h35n8

This example uses a tournament. Enter the tournament ID and click Join Tournament. The Unity Client should display a success message.

```
[Log] [ReferenceIntegration] State: JoiningTournament
[Log] [ReferenceIntegration] State: JoinedTournament
[Log] [ReferenceIntegration] Joined tournament
cmu66833q0052rz01jh3qmw0a with entry cmu66ml6s005frz01h0zbschs
[Log] [ReferenceIntegration] Entry cmu66ml6s005frz01h0zbschs created for
cmu66833q0052rz01jh3qmw0a
```

Note: click the gray box in the Unity client and scroll down if the rest of the success message is hidden.

Repeat the Process for Events

- Click Create and start event in the Sample Generator.
- Copy the event ID.
- Enter the event ID in the Unity Client and confirm the success message.

Note: Tournaments and events created with the Sample Generator have a \$0.50 entry fee. Tournaments remain open for 24 hours; events remain open indefinitely.

4. Error Test Cases

Unassociated Email: Enter an email address that is not associated with a Gamers.bet account. The email received will contain an invitation to create a Gamers.bet account rather than a game code.

Invalid Game Code: Enter an incorrect or expired game code. Authentication will fail and the client will return INVALID_CODE.

```
[Error] [ReferenceIntegration] Error INVALID_CODE: Invalid or expired game code
[Error] [ReferenceIntegration] SubmitCode failed: INVALID_CODE - Invalid or expired game code
```

Invalid Tournament ID: Enter an invalid Tournament ID and attempt to join the tournament. The client will return INVALID_TOURNAMENT_ID.

```
INVALID_TOURNAMENT_ID - The tournament ID is invalid, please check and try again
[Error] [ReferenceIntegration] Error INVALID_TOURNAMENT_ID: The tournament ID is invalid. please check and try again
```

Invalid Event ID: Enter an invalid Event ID and attempt to join the event. The client will return INVALID_EVENT_ID.

```
[Error] [ReferenceIntegration] Error INVALID_EVENT_ID: The event ID is invalid, please check and try again
[Error] [ReferenceIntegration] JoinEvent failed: INVALID_EVENT_ID - The event ID is invalid, please check and try again
```

No Wallet: Create and authenticate a user without a wallet, then attempt to join a tournament. The client returns NO_WALLET.

```
[Error] [ReferenceIntegration] Error NO_WALLET: Wallet not found
[Error] [ReferenceIntegration] JoinTournament failed: NO_WALLET - Wallet not found
```

Insufficient Funds: Authenticate a user whose wallet cannot cover the entry fee. You may try to authenticate a user whose wallet balance is \$0.00. To do this, create a user on the Gamers.bet platform, create the wallet, but do not make a deposit. Keep the wallet balance \$0.00. Then try to add the user to a tournament or event via the Unity client.

Note: The native token in the response is USDC and represents the equivalent USD value. Wallets display standard USD balances, such as \$0.00. If the competition fee exceeds the wallet balance, the join attempt fails with INSUFFICIENT_NATIVE_TOKEN. In this response, transaction fees refer to the entry fee.

```
[Error] [ReferenceIntegration] Error INSUFFICIENT_NATIVE_TOKEN:
Insufficient native token balance to cover transaction fees
[Error] [ReferenceIntegration] JoinTournament failed:
INSUFFICIENT_NATIVE_TOKEN - Insufficient native token balance to cover
transaction fees
```

5. Viewing Tournament and Event Entry in the User Portal

User View

Sign in to the User Portal using the account that joined the tournament or event via the Unity Client:

<https://app.gamers.dev/>

Click on “Stats” in the navigation. Joined tournaments and events should appear at the top of the table.

	Name	Gameplay Mode	Entries	Paid	Won	Date/Time	Status
	Big Money Gunz	Test Game Mode	2	\$0.50	\$0.00	2026-10-01 15:56	<button>OPEN</button>
	Name	Gameplay Mode	Entries	Paid	Won	Date/Time	Status
	Big Money Gunz Tournament	Test Game Mode	2	\$0.50	\$0.00	2026-10-01 15:56	<button>OPENED</button>

Select a row to view its details.

6. View Tournament Leaderboard

You can view a tournament leaderboard without authenticating a user or joining the tournament. Enter the Tournament ID and click Show Leaderboard. The selected tournament's leaderboard should appear.

To retrieve leaderboard data, enter a Tournament ID created with the Sample Generator.

Example Call Return

```
[Log] [WebSocketTransport] Connected successfully!
[Log] [ReferenceIntegration] Leaderboard has 0 entries
[Log] [ReferenceIntegration] 0 entries, showing 0
```

Note: Sample Generator tournaments return 0 leaderboard entries because the call retrieves posted scores. Unity Client users join and pay the entry fee but do not post a score.

This test confirms that an empty leaderboard correctly returns 0 score entries.
